

Author : Sruthy

Environment:

- OS: Windows 10
 - Browser:Chrome
 - Hardware configuration: 8GB RAM
 - Processor: i7
-

Objective:

- To check if all functions and the program is working fine
-

Pre-requisites:

- XAMPP Installation(Apache and MySQL to be started)
[Any other web servers can also be used]
-

Test Steps:

1. Select an image of your choice using the select button
 2. Click on any function you wish to check and change its attributes
 3. Click on Run
 4. Check if the output image is in response to the inputs.Also,check if the graph is in response to the inputs
 5. Click on Reset
 6. Repeat the aforementioned steps a couple of times
-

Expected Result:

- In each trial,the output is in correspondence with the inputs

Review / Comments:

- If the aforementioned steps are performed and works fine,all functions and the program is working properly.
